DETAILED ACTION

Drawings

The drawings were received on 27 March 2003. These drawings have been approved except for the following objection. The drawings are objected to because figure 1 must be labeled as prior art. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

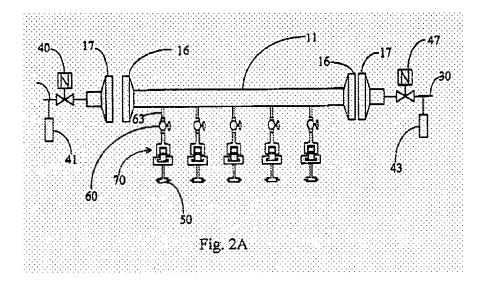

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

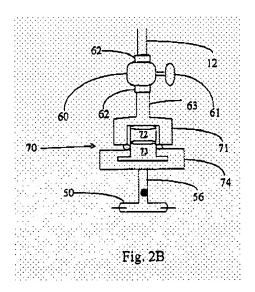

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hwang(5,496,201).

Art Unit: 2877

Hwang teaches a manifold for use in the purging of gas discharge lamps. The purging assembly comprises a manifold(11) which includes a hollow chamber which is mated by detachable joints(16,17) to a processing station(20,28,29,40,41). A plurality of passages(63) leads from the manifold to the lamps. See figure 2A.

Each of the passages comprise a first tube(12), a ball valve connector(60), and a fill tube(63) connected to each lamp. A connector(70) which includes a rubber stopper(72) connects each lamp to the passages. See figure 2B

Art Unit: 2877

Hwang is silent on the materials of the manifold and is directed to processing a plurality of discharge lamps and not laser blocks.

It would have been obvious to one of ordinary skill in the art at the time the invention was made apply the manifold assembly to the simultaneous processing of a plurality of any gas discharge devices, this would include lasers and ring lasers.

With regard to claims 4-6, and 12-14 it would have been obvious to one of ordinary skill in the art use known materials based on the processing fluids used.

With regard to claim 10 the laser block claimed is a conventional ring laser.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel A. Turner whose phone number is **571**-**272**-**2432**.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank Font, can be reached on **571-272-2415**.

The fax phone number for the organization where this application or proceeding is assigned is **703-872-9306**.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is **571-272-1562**.

Any other inquiry of a technical nature, and all inquiries of a general nature or any patent term adjustment should be directed to TC2800 Customer Service Office whose telephone number is **571-272-1585**.
